Background:

RBPJL is similar in sequence to the mouse RPB-L protein and Drosophila suppressor of hairless protein. In mouse, recombining binding protein L (RBP-L) is a transcription factor that binds to DNA sequences almost identical to that bound by the Notch receptor signalling pathway transcription factor RBP-J. However, unlike RBP-J, RBP-L does not interact with Notch receptors. RBP-L has been shown to activate transcription in concert with Epstein-Barr virus nuclear antigen-2 (EBNA2). RBPJL is similar in sequence to the mouse RPB-L protein and Drosophila suppressor of hairless protein.
