Background:	ZNF398 belongs to the krueppel C2H2-type zinc-finger protein family and may be involved in transcriptional regulation. This gene encodes a member of the Kruppel family of C2H2-type zinc-finger transcription factor proteins. The encoded protein acts as a transcriptional activator. Two transcript variants encoding distinct isoforms have been identified for this gene. Other transcript variants have been described, but their full length sequence has not been determined.
Synonyms:	P51; P71; ZER6
