#### p38 (CRK) Mouse Monoclonal Antibody [Clone ID: 3H7-E5-H8] - TA346922

Background: This gene encodes a member of an adapter protein family that binds to several tyrosine-

phosphorylated proteins. The product of this gene has several SH2 and SH3 domains (src-homology domains) and is involved in several signaling pathways, recruiting cytoplasmic proteins in the vicinity of tyrosine kinase through SH2-phosphotyrosine interaction. The N-terminal SH2 domain of this protein functions as a positive regulator of transformation whereas the C-terminal SH3 domain functions as a negative regulator of transformation. Two alternative transcripts encoding different isoforms with distinct biological activity have been

described.

Synonyms: CRKII; p38

**Protein Families:** Druggable Genome, Transcription Factors

R-mediated phagocytosis, Focal adhesion, Insulin signaling pathway, MAPK signaling pathway, Neurotrophin signaling pathway, Pathways in cancer, Regulation of actin cytoskeleton, Renal
