Background: MAST2 appears to link the dystrophin/utrophin network with microtubule filaments via the

syntrophins. Phosphorylation of DMD or UTRN may modulate their affinities for associated

proteins. Functions in a multi-protein complex in spermatid maturation. Regulates lipopolysaccharide-induced IL-12 synthesis in macrophages by forming a complex with TRAF6, resulting in the inhibition of TRAF6 NF-kappaB activation. 2 isoforms of the human

protein are produced by alternative splicing.

Synonyms: MAST205; MTSSK
