Background:	This gene encodes a member of the ALEX family of proteins and may play a role in tumor
Ducid, ourier	suppression. The encoded protein contains a potential N-terminal transmembrane domain
	and two Armadillo (arm) repeats. Other proteins containing the arm repeat are involved in
	development, maintenance of tissue integrity, and tumorigenesis. This gene is closely
	localized with other family members, including ALEX2 and ALEX3, on the X chromosome.
Synonyms:	ALEX1; GASP7
Protein Families:	Transmembrane
