Background:	This gene encodes a member of the dishevelled (dsh) protein family. The vertebrate dsh proteins have approximately 40% amino acid sequence similarity with <i>Drosophila</i> dsh. This gene encodes a 90-kD protein that undergoes posttranslational phosphorylation to form a 95-kD cytoplasmic protein, which may play a role in the signal transduction pathway mediated by multiple Wnt proteins. The mechanisms of dishevelled function in Wnt signaling are likely to be conserved among metazoans.
Synonyms:	dishevelled; dishevelled 2; dishevelled 2 (homologous to <i>Drosophila</i> dsh); DSH homolog 2; dsh homolog 2 (<i>Drosophila</i>); segment polarity protein dishevelled homolog DVL-2
Protein Families:	Druggable Genome, ES Cell Differentiation/IPS
