Background:	This gene encodes a member of the polycystin protein family. The encoded protein contains multiple transmembrane domains, and cytoplasmic N- and C-termini. The protein may be an integral membrane protein involved in cell-cell/matrix interactions. This protein functions as a calcium-regulated nonselective cation channel. Two transcript variants encoding different isoforms have been found for this gene.
Synonyms:	PCL; PKD2L; PKDL; TRPP3
Protein Families:	Druggable Genome, Ion Channels: Transient receptor potential, Transmembrane
