Background:	This gene encodes a member of the Par-1 family of serine/threonine protein kinases. The protein is an important regulator of cell polarity in epithelial and neuronal cells, and also controls the stability of microtubules through phosphorylation and inactivation of several microtubule-associated proteins. The protein localizes to cell membranes. Multiple transcript variants encoding different isoforms have been found for this gene.
Synonyms:	EMK-1; EMK1; PAR-1; Par-1b; Par1b
Protein Families:	Druggable Genome, Protein Kinase
