Gene Name:	non-SMC condensin II complex subunit G2
Database Link:	NP_060230 Entrez Gene 54892 Human Q86XI2
Background:	This gene encodes a protein that belongs to the Condensin2nSMC family of proteins. The encoded protein is a regulatory subunit of the condensin II complex which, along with the condensin I complex, plays a role in chromosome assembly and segregation during mitosis. A similar protein in mouse is required for early development of the embryo. Alternate splicing results in multiple transcript variants.
Synonyms:	CAP-G2; CAPG2; hCAP-G2; LUZP5; MTB
