Background: The protein encoded by this gene belongs to the NCP family of cell-recognition molecules.

This family represents a distinct subgroup of the neurexins. NCP proteins mediate neuron-glial interactions in vertebrates and glial-glial contact in invertebrates. The protein encoded by this gene may play a role in cell recognition within the nervous system. Alternatively spliced transcript variants encoding different isoforms have been described but their

biological nature has not been determined.

Synonyms: CASPR3; CNTNAP3A

Protein Families: Secreted Protein, Transmembrane
