Entrez Gene 114132 Human

Q96RL6

Background: This gene encodes a member of the sialic acid-binding immunoglobulin-like lectin family.

These cell surface lectins are characterized by structural motifs in the immunoglobulin (Ig)-like domains and sialic acid recognition sites in the first Ig V set domain. This family member mediates anti-inflammatory and immunosuppressive signaling. Multiple transcript variants

encoding different isoforms have been found for this gene.

Synonyms: Siglec-11

Protein Families: Druggable Genome, Transmembrane
