## **GRIGENE** IRS1 Rabbit Polyclonal Antibody – TA354425

Background:	Insulin Receptor Substrate-1 (IRS-1), 165 kDa cytoplasmic docking protein, is one of the major endogenous substrates of the insulin receptor kinase. IRS-1 contains multiple tyrosine phosphorylation motifs that serve as docking sites for SH2 domain containing proteins, which mediate the metabolic and growth promoting functions of insulin. IRS-1 also contains over 30 potential serine/threonine phosphorylation sites. Ser312 of IRS-1 is phosphorylated by JNK and IKK and Ser789 is phosphorylated by SIK-2, a member of AMPK family. The phosphorylation of Tyr612 and Ser636/639 is mediated by the PKC and mTOR pathways, respectively and phosphorylation at Ser1101 is mediated by PKC, resulting in an inhibition of insulin signaling in the cell, suggesting a potential mechanism for insulin resistance in some models of obesity.
Synonyms:	HIRS-1
Protein Families:	Druggable Genome
Protein Pathways:	Adipocytokine signaling pathway, Insulin signaling pathway, Neurotrophin signaling pathway, Type II diabetes mellitus

WB: The cell lysate derived from insulin stimulated CHO was immunoprecipitated by Rabbit anti-IRS-1 (pS312) antibody, then immunoprobed by the same antibody at 1:500 (lane 1). Lane 2 is a negative control.

DB: 1 ug peptide was blot onto NC membrane A: IRS-1 (pS312) B: IRS-1 (non phosphorylated) C: Non-related Phosphopeptide) Followed by rabbit antibodies incubation at a 1:1000 dilution: 1: Rabbit anti-IRS-1 (pS312) 2: Rabbit anti-IRS-1 (Paired S312)
