# Product datasheet for TA355109

## LIGHT (TNFSF14) Mouse Monoclonal Antibody [Clone ID: 7B9F12]

### **Product data:**

Product Type:	Primary Antibodies
Clone Name:	7B9F12
Applications:	FC, IF, IHC, WB
Recommended Dilution:	WB start at 0.5 - 1 ug/mL. IHC start at 2 - 5 ug/mL. IF start at 20 ug/mL.
Reactivity:	Human
Host:	Mouse
lsotype:	lgG2b
Clonality:	Monoclonal
Immunogen:	LIGHT antibody was raised against the extracellular domain of human LIGHT.
Formulation:	LIGHT Antibody is supplied in PBS containing 0.02% sodium azide.
Concentration:	1 mg/ml
Purification:	LIGHT Antibody is supplied as protein A purified IgG2b.
Conjugation:	Unconjugated
Storage:	Store at -20°C as received.
Stability:	Stable for 12 months from date of receipt.
Predicted Protein Size:	Predicted: 26 kDa.
Gene Name:	tumor necrosis factor superfamily member 14
Database Link:	<u>NP_003798</u> <u>Entrez Gene 8740 Human</u> <u>O43557</u>

This product is to be used for laboratory only. Not for diagnostic or therapeutic use. ©2023 OriGene Technologies, Inc., 9620 Medical Center Drive, Ste 200, Rockville, MD 20850, US

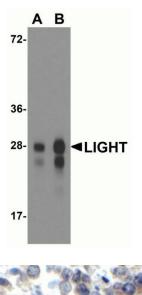

### CRIGENE LIGHT (TNFSF14) Mouse Monoclonal Antibody [Clone ID: 7B9F12] – TA355109

Background:LIGHT Antibody: LIGHT, also known as Tumor Necrosis Factor Superfamily member 14<br/>(TNFSF14), is a co-stimulatory molecule that can regulate T-cell activation and has recently<br/>been identified as an immune checkpoint protein. LIGHT binds to two different receptors,<br/>Herpes Virus Entry Mediator (HVEM) and Lymphotoxin beta Receptor (LTbR). While LIGHT<br/>binding to HVEM delivers a co-stimulatory signal to T cells , LIGHT binding to LTbR is critical<br/>for the formation of lymphoid structures which can stimulate T cell infiltration and activation<br/>of a tumor microenvironment, leading to rapid T cell-mediated tissue destruction. It has been<br/>shown that targeted delivery of LIGHT to tumors, thereby causing the T cell infiltration of the<br/>tumor, can enhance the response of the PD-1/PD-L1 checkpoint blockade anti-cancer<br/>therapy,suggesting that LIGHT may become a potent tool in anti-cancer treatment.

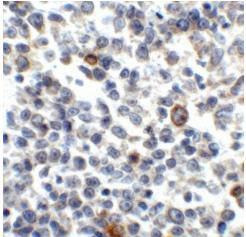

Synonyms:

CD258; HVEM-L; HVEML; LIGHT; LTg; TR2
