Gene Name: nudE neurodevelopment protein 1

Database Link: Entrez Gene 54820 Human

Q9NXR1

Background: This gene encodes a member of the nuclear distribution E (NudE) family of proteins. The

> encoded protein is localized at the centrosome and interacts with other centrosome components as part of a multiprotein complex that regulates dynein function. This protein plays an essential role in microtubule organization, mitosis and neuronal migration.

Mutations in this gene cause lissencephaly 4, a disorder characterized by lissencephaly, severe brain atrophy, microcephaly, and severe mental retardation. Alternative splicing

results in multiple transcript variants.
