Entrez Gene 7499 Human

P55808

Background: This gene encodes the XG blood group antigen, and is located at the pseudoautosomal

boundary on the short (p) arm of chromosome X. The three 5' exons reside in the

pseudoautosomal region and the remaining exons within the X-specific end. A truncated copy

of this gene is found on the Y chromosome at the pseudoautosomal boundary. It is

transcribed, but not expected to make a Y-chromosome specific gene product. Alternatively spliced transcript variants encoding different isoforms have been found for this gene.
