Gene Name: 6-phosphofructo-2-kinase/fructose-2,6-biphosphatase 1

Database Link: NP 002616

Entrez Gene 5207 Human

P16118

Background: This gene encodes a member of the family of bifunctional 6-phosphofructo-2-kinase:fructose-

2,6-biphosphatase enzymes. The enzyme forms a homodimer that catalyzes both the synthesis and degradation of fructose-2,6-biphosphate using independent catalytic domains.

Fructose-2,6-biphosphate is an activator of the glycolysis pathway and an inhibitor of the gluconeogenesis pathway. Consequently, regulating fructose-2,6-biphosphate levels through

the activity of this enzyme is thought to regulate glucose homeostasis.
