Entrez Gene 85569 Human

Q9UBC7

Background: This gene encodes a member of the galanin family of neuropeptides. The encoded protein

binds galanin receptors 1, 2 and 3 with the highest affinity for galanin receptor 3 and has been implicated in biological processes involving the central nervous system including hypothalamic regulation of metabolism and reproduction. A peptide encoded by a splice variant of this gene, termed alarin, may have vasoactive properties and serve as a marker for

neuroblastic tumors.

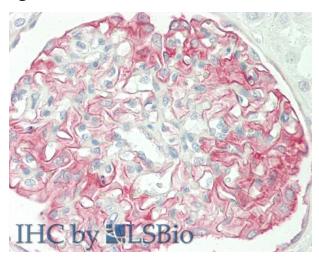

Synonyms: alarin

Protein Families: Secreted Protein
