Image: CRICENE TRAF5 Rabbit Polyclonal Antibody - TA359810 Background: The scaffold protein encoded by this gene is a member of the tumor necrosis factor receptorassociated factor (TRAF) protein family and contains a meprin and TRAF homology (MATH) domain, a RING-type zinc finger, and two TRAF-type zinc fingers. TRAF proteins are associated with and mediate signal transduction from members of the TNE receptor superfamily. This

with, and mediate signal transduction from members of the TNF receptor superfamily. This protein is one of the components of a multiple protein complex which binds to tumor necrosis factor (TNF) receptor cytoplasmic domains and mediates TNF-induced activation. Alternate transcriptional splice variants have been characterized.
