Entrez Gene 54878 Human

H3BNM2

Background: This gene encodes a member of the peptidase S9B family, a small family of dipeptidyl

peptidases that are able to cleave peptide substrates at a prolyl bond. The encoded protein

shares similarity with dipeptidyl peptidase IV in that it is ubiquitously expressed, and

hydrolyzes the same substrates. These similarities suggest that, like dipeptidyl peptidase IV,

this protein may play a role in T-cell activation and immune function. Alternatively spliced

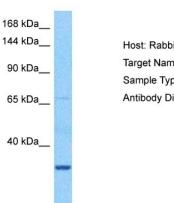

transcript variants encoding different isoforms have been described.
