Entrez Gene 6307 Human

Q15800

Background: Sterol-C4-mehtyl oxidase-like protein was isolated based on its similarity to the yeast ERG25

protein. It contains a set of putative metal binding motifs with similarity to that seen in a family of membrane desaturases-hydroxylases. The protein is localized to the endoplasmic reticulum membrane and is believed to function in cholesterol biosynthesis. Alternatively spliced transcript variants encoding distinct isoforms have been found for this gene.

Synonyms: Sc4mol

Protein Families: Transmembrane

Protein Pathways: Metabolic pathways, Steroid biosynthesis
