Database Link:	NP_001258652.1 Entrez Gene 81545 Human Q6PIJ6-3
Background:	This gene encodes a large protein that contains an F-box domain and may participate in protein ubiquitination. The encoded protein is a transcriptional co-activator of Krueppel-like factor 7 (Klf7). A heterozygous mutation in this gene was found in individuals with autosomal dominant distal hereditary motor neuropathy type IID. There is a pseudogene for this gene on chromosome 4. Alternative splicing results in multiple transcript variants.
