Gene Name:	Bet1 golgi vesicular membrane trafficking protein
Database Link:	NP_005859.1 Entrez Gene 10282 Human O15155
Background:	This gene encodes a golgi-associated membrane protein that participates in vesicular transport from the endoplasmic reticulum (ER) to the Golgi complex. The encoded protein functions as a soluble N-ethylmaleimide-sensitive factor attachment protein receptor and may be involved in the docking of ER-derived vesicles with the cis-Golgi membrane. Alternative splicing results in multiple transcript variants.
Synonyms:	DKFZp781C0425; hbet1
