Entrez Gene 83593 Human

Q8WWW0

Background: This gene is a member of the Ras association domain family. It functions as a tumor

suppressor, and is inactivated in a variety of cancers. The encoded protein localizes to centrosomes and microtubules, and associates with the GTP-activated forms of Ras, Rap1, and several other Ras-like small GTPases. The protein regulates lymphocyte adhesion and suppresses cell growth in response to activated Rap1 or Ras. Multiple transcript variants

encoding different isoforms have been found for this gene.
