CD5 Mouse Monoclonal Antibody [Clone ID: CRIS-1] - TA363837Background:Monoclonal antibody CRIS-1 recognizes the human CD5 antigen. CD5 is expressed at low
density early on thymocytes and at high density on all mature T lymphocytes. CD5 is
expressed at low density on a small subset of mature B lymphocytes (B1a cells) which is
expanded during fetal life and in several autoimmune disorders as well as in some B cell-
derived lymphoproliferative disorders (chronic lymphocytic leukemia, CLL). CD5 is a
glycoprotein monomer of 67kD which belongs to the scavenger receptor cysteine- rich (SRCR)
family of extracellular domain-like structures and possesses a large cytoplasmic domain
suitable for signal transduction

Synonyms: LEU1; T1
