Background:	Luteinizing hormone-releasing hormone (LHRH), also known as Gonadotropin-Releasing Hormone (GnRH) or Luteinizing Hormone-Releasing Factor (LRF), is a hypothalamic neuropeptide which acts on the pituitary to stimulate the release of luteinizing hormone (LH) and follicle-stimulating hormone (FSH). LHRH may act as a growth modulatory factor in tumors of the reproductive system. The effects of LHRH are mediated by high-affinity G protein-coupled LHRH-receptor (LHRH-R) on pituitary gonadotropes. HRH and LHRH receptors (LHRH-Rs) are expressed in human melanoma cells and LHRH-Rs are found in more than 50% of human breast cancers. This antibody was generated by immunization of rabbits with Luteinizing Hormone-Releasing Hormone coupled to a carrier protein.
Synonyms:	GNRH; GRH; LHRH; LNRH
