Database Link:	Entrez Gene 2641 Human P01275
Background:	Oxyntomodulin (OXM) a 37-amino acid peptide hormone found in the colon, produced by the oxyntic cells of the oxyntic mucosa. It is known to suppress appetite and causes weight loss in humans and rodents. Oxyntomodulin activates both the glucagon-like peptide-1 receptor (GLP1R) and the glucagon receptor (GCGR). It contains the same sequence as Glucagon (1-29), but with an additional KRNKNNIA C-terminal sequence. This antibody was generated by immunization of rabbits with Oxyntomodulin coupled to a carrier protein.
Synonyms:	GLP1; GLP2; glucagon; GRPP
