Background: This gene encodes a member of the ADAMTS (a disintegrin and metalloproteinase with

thrombospondin motifs) protein family. ADAMTS family members share several distinct protein modules, including a propeptide region, a metalloproteinase domain, a disintegrin-like domain, and a thrombospondin type 1 (TS) motif. Individual members of this family differ in the number of C-terminal TS motifs, and some have unique C-terminal domains. The

protein encoded by this gene has a high sequence similarity to the proteins encoded by

ADAMTS1 and ADAMTS8.

Synonyms: ADAM-TS15; ADAMTS-15; MGC126403
