Q15628

Background: The protein encoded by this gene is a death domain containing adaptor molecule that

interacts with TNFRSF1A/TNFR1 and mediates programmed cell death signaling and NF-kappaB activation. This protein binds adaptor protein TRAF2, reduces the recruitment of inhibitor-of-apoptosis proteins (IAPs) by TRAF2, and thus suppresses TRAF2 mediated apoptosis. This protein can also interact with receptor TNFRSF6/FAS and adaptor protein

FADD/MORT1, and is involved in the Fas-induced cell death pathway.
