Background: The protein encoded by this gene is similar in sequence to the amino terminus of Drosophila

enhancer of split groucho, a protein involved in neurogenesis during embryonic

development. The encoded protein, which belongs to the groucho/TLE family of proteins, can

function as a homooligomer or as a heteroologimer with other family members to

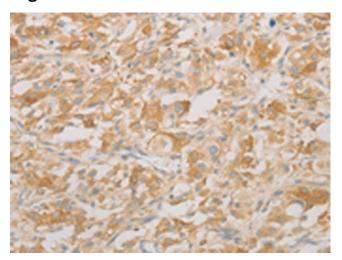

dominantly repress the expression of other family member genes. Three transcript variants encoding different isoforms have been found for this gene. [provided by RefSeq, Jul 2008]

Synonyms: AES-1; AES-2; ESP1; GRG; GRG5; TLE5
