Background: This gene belongs to the ubiquitin C-terminal hydrolase subfamily of deubiquitinating

enzymes that are involved in the removal of ubiquitin from proteins. The encoded enzyme binds to the breast cancer type 1 susceptibility protein (BRCA1) via the RING finger domain of

the latter and acts as a tumor suppressor. In addition, the enzyme may be involved in

regulation of transcription, regulation of cell cycle and growth, response to DNA damage and

chromatin dynamics. Germline mutations in this gene may be associated with tumor

predisposition syndrome (TPDS), which involves increased risk of cancers including malignant

mesothelioma, uveal melanoma and cutaneous melanoma.
