Gene Name:	BUB1 mitotic checkpoint serine/threonine kinase
Database Link:	Entrez Gene 699 Human O43683
Background:	This gene encodes a serine/threonine-protein kinase that play a central role in mitosis. The encoded protein functions in part by phosphorylating members of the mitotic checkpoint complex and activating the spindle checkpoint. This protein also plays a role in inhibiting the activation of the anaphase promoting complex/cyclosome. This protein may also function in the DNA damage response. Mutations in this gene have been associated with aneuploidy and several forms of cancer. Alternate splicing results in multiple transcript variants.
Synonyms:	BUB1A; BUB1L; hBUB1
