

# Product datasheet for TA366332

## SRPK2 Rabbit Polyclonal Antibody

## **Product data:**

Product Type:	Primary Antibodies
Applications:	IHC
Recommended Dilution:	IHC: 50-200 Positive control: Human liver cancer Predicted cell location: Cytoplasm
Reactivity:	Human, Mouse
Host:	Rabbit
lsotype:	lgG
Clonality:	Polyclonal
Immunogen:	Fusion protein of human SRPK2
Formulation:	pH7.4 PBS, 0.05% NaN3, 40% Glycerol
Concentration:	lot specific
Purification:	Antigen affinity purification
Conjugation:	Unconjugated
Storage:	Store at -20°C.
Stability:	1 year
Gene Name:	SRSF protein kinase 2
Database Link:	<u>Entrez Gene 6733 Human</u> <u>P78362</u>

### **GRIGENE** SRPK2 Rabbit Polyclonal Antibody – TA366332

Background:Serine/arginine-rich protein-specific kinase which specifically phosphorylates its substrates at<br/>serine residues located in regions rich in arginine/serine dipeptides, known as RS domains<br/>and is involved in the phosphorylation of SR splicing factors and the regulation of splicing.<br/>Promotes neuronal apoptosis by up-regulating cyclin-D1 (CCND1) expression. This is done by<br/>the phosphorylation of SRSF2, leading to the suppression of p53/TP53 phosphorylation<br/>thereby relieving the repressive effect of p53/TP53 on cyclin-D1 (CCND1) expression.<br/>Phosphorylates ACIN1, and redistributes it from the nuclear speckles to the nucleoplasm,<br/>resulting in cyclin A1 but not cyclin A2 up-regulation. Plays an essential role in spliceosomal B<br/>complex formation via the phosphorylation. Plays a negative role in the regulation of HBV replication<br/>through a mechanism not involving the phosphorylation of the core protein but by reducing<br/>the packaging efficiency of the pregenomic RNA (pgRNA) without affecting the formation of<br/>the viral core particles.

Synonyms:

FLJ36101; H\_RG152G17.1a; H\_RG152G17.1b; SFRSK2; WUGSC:H\_RG152G17.1a
