Q14240

Background: ATP-dependent RNA helicase which is a subunit of the eIF4F complex involved in cap

recognition and is required for mRNA binding to ribosome. In the current model of

translation initiation, eIF4A unwinds RNA secondary structures in the 5'-UTR of mRNAs which

is necessary to allow efficient binding of the small ribosomal subunit, and subsequent

scanning for the initiator codon.

Synonyms: BM-010; DDX2B; eIF-4A-II; EIF4A; eIF4A-II; EIF4F
