Background: PSM is an integral membrane protein, and PCTA-1 is related to the galectin gene family, which

mediate both cell-cell and cell-matrix interactions in a manner similar to the selectin

subgroup of C-type lectins. STEAP is a serpentine transmembrane cell-surface tumor-antigen that is predicted to functions as a channel or transporter protein. In addition to prostate

cancers, STEAP is also upregulated in bladder, colon and ovarian cancers.

Synonyms: FOLH2; FOLHP; GCP3; GCPIII; NAALADase; PSM; PSMA-LIKE; PSMAL
