**Background:** The protein encoded by this gene is a member of the platelet-derived growth factor/vascular

endothelial growth factor (PDGF/VEGF) family and is active in angiogenesis,

lymphangiogenesis, and endothelial cell growth. This secreted protein undergoes a complex proteolytic maturation, generating multiple processed forms which bind and activate VEGFR-2 and VEGFR-3 receptors. This protein is structurally and functionally similar to vascular endothelial growth factor C. Read-through transcription has been observed between this

locus and the upstream PIR (GeneID 8544) locus. [provided by RefSeq, Feb 2011]

Synonyms: VEGF-D; VEGFD
