Background: The protein encoded by this gene is part of a complex that is involved in membrane

trafficking. The encoded protein is a molecular chaperone that aids in protein folding upon ATP hydrolysis. This protein also plays a role in adipocyte differentiation. Defects in this gene are a cause of Bardet-Biedl syndrome type 12. Two transcript variants encoding the same

protein have been found for this gene.

Synonyms: C4orf24; FLJ35630; FLJ41559
