<b>Background:</b>	Cell membrane-cytoskeleton-associated protein that plays a role in the regulation of actin polymerization at the barbed end of actin filaments. Prevents F-actin heterodimeric capping protein (CP) activity at the leading edges of migrating cells, and hence generates uncapped barbed ends and enhances actin polymerization, however, seems unable to nucleate filaments (PubMed:16054028). Plays a role in lamellipodial protrusion formations and cell migration (PubMed:19846667).
<b>Synonyms:</b>	CARMIL; CARMIL1a; dj501N12.1; dj501N12.5; FLJ20048; FLJ43708; LRRC16
