Primary Antibodies IHC Recommended Dilution: IHC: 50-100 Positive control: Human esophagus cancer Predicted cell location: Secreted Human, Mouse, Rat Rabbit lgG Polyclonal Synthetic peptide of human DPP6 pH7.4 PBS, 0.05% NaN3, 40% Glycerol lot specific Antigen affinity purification Unconjugated Store at -20°C. 1 year

Gene Name: dipeptidyl peptidase like 6 Database Link: Entrez Gene 1804 Human P42658

Background: This gene encodes a single-pass type II membrane protein that is a member of the peptidase S9B family of serine proteases. This protein has no detectable protease activity, most likely due to the absence of the conserved serine residue normally present in the catalytic domain of serine proteases. However, it does bind specific voltage-gated potassium channels and alters their expression and biophysical properties. Variations in this gene may be associated with susceptibility to amyotrophic lateral sclerosis and with idiopathic ventricular fibrillation. Alternative splicing results in multiple transcript variants.

Synonyms:

DPPX; FLJ55680; MGC46605; VF2
