GRIGENE IKAP (IKBKAP) Rabbit Polyclonal Antibody – TA368537

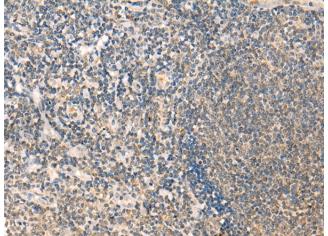

Background:The protein encoded by this gene is a scaffold protein and a regulator for three different
kinases involved in proinflammatory signaling. The encoded protein can bind NF-kappa-B-
inducing kinase and I-kappa-B kinases through separate domains and assemble them into an
active kinase complex. Mutations in this gene have been associated with familial
dysautonomia. Alternative splicing results in multiple transcript variants encoding different
isoforms.

Synonyms: DKFZp781H1425; DYS; ELP1; FD; FLJ12497; IKAP; IKI3; p150; TOT1
