**Gene Name:** integrin subunit alpha 11

**Database Link:** Entrez Gene 22801 Human

Q9UKX5

**Background:** This gene encodes an alpha integrin. Integrins are heterodimeric integral membrane proteins

composed of an alpha chain and a beta chain. This protein contains an I domain, is expressed in muscle tissue, dimerizes with beta 1 integrin in vitro, and appears to bind collagen in this form. Therefore, the protein may be involved in attaching muscle tissue to the extracellular matrix. Alternative transcriptional splice variants have been found for this gene,

but their biological validity is not determined.
