| Background:             | This gene product belongs to the 14-3-3 family of proteins which mediate signal transduction<br>by binding to phosphoserine-containing proteins. This highly conserved protein family is<br>found in both plants and mammals, and this protein is 99% identical to the mouse, rat and<br>bovine orthologs. This gene contains a 7 bp repeat sequence in its 5' UTR, and changes in the<br>number of this repeat have been associated with early-onset schizophrenia and psychotic<br>bipolar disorder. |
