

Product datasheet for TA368898S

AARE (APEH) Rabbit Polyclonal Antibody

Product data:

Product Type: Primary Antibodies

Applications: IHC

Recommended Dilution: IHC: 30-150

Positive control: Human liver cancer Predicted cell location: Cytoplasm

Reactivity: Human, Mouse, Rat

Host: Rabbit Isotype: IgG

Clonality: Polyclonal

Immunogen: Fusion protein of human APEH

Formulation: pH7.4 PBS, 0.05% NaN3, 40% Glycerol

Purification: Antigen affinity purification

Conjugation: Unconjugated Storage: Store at -20°C.

Stability: 1 year

Gene Name: acylaminoacyl-peptide hydrolase

Database Link: Entrez Gene 327 Human

P13798

Background: This gene encodes the enzyme acylpeptide hydrolase, which catalyzes the hydrolysis of the

terminal acetylated amino acid preferentially from small acetylated peptides. The acetyl amino acid formed by this hydrolase is further processed to acetate and a free amino acid by an aminoacylase. This gene is located within the same region of chromosome 3 (3p21) as the

aminoacylase gene, and deletions at this locus are also associated with a decrease in

aminoacylase activity. The acylpeptide hydrolase is a homotetrameric protein of 300 kDa with

each subunit consisting of 732 amino acid residues. It can play an important role in

destroying oxidatively damaged proteins in living cells. Deletions of this gene locus are found in various types of carcinomas, including small cell lung carcinoma and renal cell carcinoma.

Synonyms: AARE; ACPH; acylaminoacyl-peptidase; APH; D3F15S2; D3S48E; DNF15S2; MGC2178; OPH
