**Database Link:** Entrez Gene 4284 Human

P30301

**Background:** Major intrinsic protein is a member of the water-transporting aquaporins as well as the

original member of the MIP family of channel proteins. The function of the fiber cell membrane protein encoded by this gene is undetermined, yet this protein is speculated to

play a role in intracellular communication. The MIP protein is expressed in the ocular lens and is required for correct lens function. This gene has been mapped among aquaporins

AQP2, AQP5, and AQP6, in a potential gene cluster at 12q13.

Synonyms: AQP0; Aquaporin-0; LIM1; MIP26; MP26
