TBXAS1 Rabbit Polyclonal Antibody – TA369064

Background:This gene encodes a member of the cytochrome P450 superfamily of enzymes. The
cytochrome P450 proteins are monooxygenases which catalyze many reactions involved in
drug metabolism and synthesis of cholesterol, steroids and other lipids. However, this
protein is considered a member of the cytochrome P450 superfamily on the basis of
sequence similarity rather than functional similarity. This endoplasmic reticulum membrane
protein catalyzes the conversion of prostglandin H2 to thromboxane A2, a potent
vasoconstrictor and inducer of platelet aggregation. The enzyme plays a role in several
pathophysiological processes including hemostasis, cardiovascular disease, and stroke.
Alternatively spliced transcript variants encoding different isoforms have been found for this
gene.

Synonyms: CYP5; CYP5A1; THAS; TS; TXAS; TXS
