GRIGENE FADS1 Rabbit Polyclonal Antibody – TA369116

Background:The protein encoded by this gene is a member of the fatty acid desaturase (FADS) gene
family. Desaturase enzymes regulate unsaturation of fatty acids through the introduction of
double bonds between defined carbons of the fatty acyl chain. FADS family members are
considered fusion products composed of an N-terminal cytochrome b5-like domain and a C-
terminal multiple membrane-spanning desaturase portion, both of which are characterized
by conserved histidine motifs. This gene is clustered with family members FADS1 and FADS2
at 11q12-q13.1; this cluster is thought to have arisen evolutionarily from gene duplication
based on its similar exon/intron organization.
