GRIGENE FAM3B Rabbit Polyclonal Antibody – TA369119

Background:FAM3B (family with sequence similarity 3, member B), also known as ORF9, C21orf11 or
PANDER, is a 235 amino acid secreted protein that localizes to discrete vesicular and
perinuclear structures. Expressed at high levels in pancreas and at lower levels in kidney,
colon, testis, prostate and small intestine, FAM3B functions as an islet-specific cytokine that
promotes apoptosis and may inhibit Insulin secretion from beta-cells, possibly playing a role
in overall pancreatic activity. Human FAM3B shares 78% sequence identity with its mouse
counterpart, suggesting a conserved role between species. Three isoforms of FAM3B,
designated A, B and C, exist due to alternative splicing events. The gene encoding FAM3B
maps to human chromosome 21, which houses approximately 300 genes and comprises
nearly 1.5% of the human genome.
