Gene Name: triggering receptor expressed on myeloid cells 1

Database Link: Entrez Gene 54210 Human

Q9NP99

Background: This gene encodes a receptor belonging to the lg superfamily that is expressed on myeloid

cells. This protein amplifies neutrophil and monocyte-mediated inflammatory responses triggered by bacterial and fungal infections by stimulating release of pro-inflammatory chemokines and cytokines, as well as increased surface expression of cell activation markers. Alternatively spliced transcript variants encoding different isoforms have been noted for this

gene.

Synonyms: TREM-1
