Background: Acts as one of several non-catalytic accessory components of the cytoplasmic dynein 1

complex that are thought to be involved in linking dynein to cargos and to adapter proteins that regulate dynein function. Cytoplasmic dynein 1 acts as a motor for the intracellular retrograde motility of vesicles and organelles along microtubules. May play a role in changing

or maintaining the spatial distribution of cytoskeletal structures (By similarity).

Synonyms: DLC2; DNCL1B; MGC17810; RSPH22
