**Background:** This gene encodes a member of the leucine-rich repeat-containing family of proteins, which

function in diverse biological pathways. This family member may possibly be a nuclear protein. Similarity to the RAS suppressor protein, as well as expression down-regulation observed in tumor cells, suggests that it may function as a tumor suppressor. The gene is located in the chromosome 3 common eliminated region 1 (C3CER1), a 1.4 Mb region that is

commonly deleted in diverse tumors. A related pseudogene has been identified on

chromosome 2.

Synonyms: LRRC2
