## **BCL6B** Rabbit Polyclonal Antibody – TA369826S

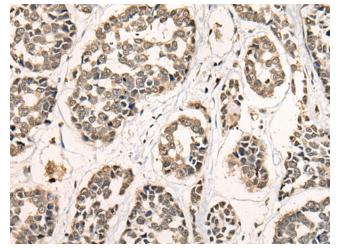

Background:Bcl-6, a transcriptional repressor, binds Stat recognition-like DNA elements and influences<br/>germinal center development and cell differentiation. Additionally, Bcl-6 negatively regulates<br/>NF°B expression, thereby inhibiting NF°B-mediated cellular functions. Bcl-6b (B-cell<br/>CLL/lymphoma 6, member B), also known as ZNF62, BAZF or ZBTB28, is a 480 amino acid<br/>nuclear protein that contains one BTB (POZ) domain and five C2H2-type zinc fingers.<br/>Expressed ubiquitously with highest expression in placenta and heart, Bcl-6b associates with<br/>Bcl-6 and functions as a sequence-specific transcriptional repressor that is thought to be<br/>necessary for early B-cell development. The gene encoding Bcl-6b maps to human<br/>chromosome 17, which comprises over 2.5% of the human genome and encodes over 1,200<br/>genes.

Synonyms: BAZF; ZBTB28; ZNF62
